WS-UCC4000-F406-B41-01-02

- Battery operated
- Data transfer via LoRaWAN
- LoRaWAN downlink channel for querying and adjusting parameter values
- Bluetooth interface for commissioning, parameterization and diagnostics

Wireless ultrasonic sensor with LoRaWAN interface, especially for fill level measurement in tanks and silos, sensing range 250 ... 4000 mm, resolution 1 mm

Function

The wireless ultrasonic sensor can be remotely used for fill level measurement, level monitoring and distance measurement. The measured variables and other measurement and status data of the sensor are recorded in configurable time intervals and transmitted to a counterpart in the LoRa network. There, the data is available for pure display or further processing. The sensor's downlink channel can be used to remotely access the sensor from the LoRa network to query or adjust sensor parameter values. Sensor parameterization is additionally also possible via the integrated Bluetooth interface using a mobile device (smartphone or tablet) and the WILSEN app associated with the sensor.
